

**Cieľom projektu** bolo rozšírenie Forvio platformy o modul, ktorý umožňuje načítavanie marketingových dát akéhokoľvek API, bez nutnosti programovania konektora pre dané API.

**Univerzálny API Konektor** umožňuje načítavanie dát pomocou HTTP dopytov, následne ich spracuje pomocou **JSONPath** selektorov. Výstupné dáta uloží do **Big Query** databázy. Big Query databázu už následne dokáže **Forvio** spracovať
